Aims and Scope

TALANTA, published monthly, provides a forum for the rapid publication of original research papers, preliminary communications, full reviews and mini-reviews. Other features are annotations (critical commentaries), analytical data (stability constants *etc.*) and letters to the editor.

In addition to welcoming papers in the traditional fields of pure and applied analytical chemistry, and in order to provide an interface between those doing research and those applying the results of research in analytical chemistry, the editors wish to encourage submission of reports on developments and new techniques in fields such as

1. Toxic Impurities in Biological Systems
2. Food Additives
3. Pharmaceutical and Drug Analysis
4. Pesticides and Fungicides
5. Clinical Chemistry
6. Materials, Science and Engineering
7. Geochemistry
8. Environmental Analysis

Contributions will be expected to be of the high standard set and maintained by *Talanta* and to make a definite and useful contribution to analytical chemistry: they must be new publications. Papers may be written in English, French or German. Equal importance is attached to fundamental research work and to applications of practical importance. Reviews of rapidly expanding fields or of hitherto widely scattered material are welcomed but should be critical. Original papers, short communications and reviews are refereed in the usual way: preliminary communications (intended for the rapid publication of novel ideas and lines of research) are refereed urgently and published direct from typescript to give utmost speed of publication. Correspondence of interest to analytical chemists is published at the discretion of the Editor-in-Chief.

Talanta Annual Subscription Rates (1986)

Multiple-reader institutions: US$350.000 (2-yr rate US$665.00).
Specially reduced rate to individuals: US$75.00.
